Products and Services

AbaData[tm]

We made AbaData[tm] an accurate and user-friendly oil and gas mapping software tool; companies like yours made it one of the most popular in the industry.

AbaDatatm provides instant access to oilfield information, graphically displaying oilfield facility locations and associated data in Alberta, B.C. and Saskatchewan.

Because the software is Web-based, subscribers can log in anywhere they have Internet access, and the updating process for the user is download-free and seamless.

Information layers include ERCB pipelines and wells, wellsite survey plans, Crown land dispositions, registered survey plan boundaries, county maps, AGRASID soil data, ERCB spills and complaints and much more. Refer to the data set list for a complete overview.

AbaData reports easily transfer to Microsoft Excel.
Aerial and satellite photos are available.
All information is easily printed.
Information is updated often, and user feedback is routinely implemented.

AbaData LITE™

If you don't always have access to the Internet, AbaData LITE™ gives you the same ease-of-use as AbaData™, but comes in CD-ROM. Just download AbaData LITE™ onto your laptop and use it anywhere in the field.

Easy-to-navigate map allows you to view wells, high-and-low-pressure pipelines, and registered ROWs.
GPS function lets you track roads and locate pipelines and wells.
Data is kept current through information updates sent to you monthly on CD-ROM.

AbaData GPS™

Get current, reliable industry mapping in a transportable waterproof GPS package.

AbaData GPS™ is a unique product in the oilfield mapping industry, with critical mapping information, including wells, pipelines, pipeline right-of-ways, the township grid and roads, loaded into a handheld GPS, a mainstay for mapping enthusiasts world wide.

Subscribing to AbaData GPStm gives you the ability to accurately locate facilities in the field, like pipeline right-of-ways and buried wellheads with a Garmin high-sensitivity GPS receiver.

Your mapping data is updated monthly through discs sent to you that keep you current on rapid changes in the industry.

AbaData GPS™ is available on a Garmin Oregon 450 that features:

Rugged touch screen
Improved display quality
Built-in world basemap
Wireless data transfer between units

Direction Map

Direction Map gives you instant directions, whether by LSD, municipality or GPS coordinates, to any jobsite in Alberta or Saskatchewan. You can then measure distances on the map, access aerial and satellite imagery, and save or print maps for distribution to your drivers.
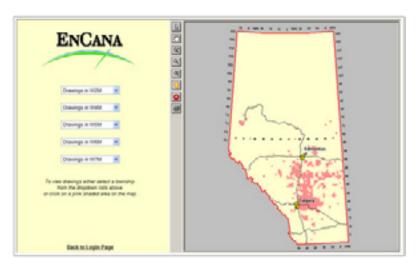

Oilfield Atlas

This is the only atlas you'll ever need. With more than 100 laminated pages, this bound, durable atlas contains detailed Alberta maps, complete gas plant listings with page references and truck route maps for all major centers. Contact us to learn about updating options.

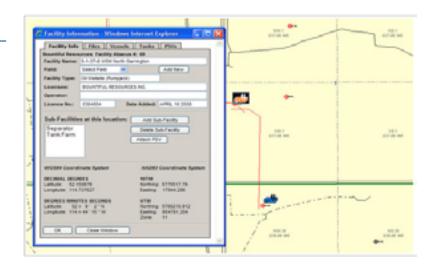

Dedicated Mapping

We offer a range of customized services. We regularly distribute much of our data through large-format wall maps, mapping booklets and road maps. Because information is always changing and mapping is being updated constantly, the Abacus Dedicated Mapping link allows our customers to view their mapping through this convenient web-based interface. With a Dedicated Mapping username and password, you can see the most up-to-date version of your Abacus map.

Equipment Management

If you work for an E&P company, your organization may have equipment scattered across multiple fields in Alberta, or even Western Canada. Facilities with tanks, vessels or pressure safety valves that require regular inspection and maintenance. Equipment that may have recently been sold or re-acquired.

Now, you can log in to AbaDatatm and instantly see your facilities on the map screen. And on top of that, you can access and maintain your own equipment database and inspection schedule.

AbaDatatm Equipment Management allows you to:

Keep track of inspection and compliance issues.
Instantly see which vessels and valves are in place at given facilities.
Assign tasks where work is required.
Determine which users have the ability to add or alter equipment data.
Interested? Contact us to schedule a demonstration for your office, and try Equipment Management for free.

Pipeline Signs

Maintaining compliance with pipeline warning sign regulations can be an onerous task -- the number of road, trail, railway or water-crossings can add up along the length of any pipeline. Add the responsibility for sign maintenance and relocation and it becomes easier to see why many Alberta companies fall short of compliance.

We can make it easier.

Our pipeline sign projects are genuinely full-service, and include:
Design and manufacture with your company logo.
Area audit to determine crossing locations.
Sign installation, using a low-impact hydrodig system where possible.
Alberta One-Call notification where required.
Crossing locations plotted on physical maps or on AbaData. AbaData information includes water crossing inspection forms, sign images and verification dates.
Contact us to discuss the details.
